<u>IN THE CLAIMS</u>

This listing of claims replaces all prior listings:

1. (currently amended) A person authentication application data processing system for performing a person authentication process ~~based on a verification process between~~ <u>by comparing</u> a template extracted from a person identification certificate, ~~in which~~ the template ~~which is~~ <u>including</u> person identification data of an individual user who uses an information processing apparatus, and user input sampling information, said person authentication application data processing system comprising:

an information processing apparatus <u>that performs person authentication</u> ~~as a person authentication execution entity~~; and

a person identification certificate authority <u>that issues person identification certificates</u> ~~as a person identification certificate issuing entity~~,

wherein said information processing apparatus ~~performs a process of retrieving~~ <u>retrieves</u> a person identification certificate ~~used~~ for a person authentication ~~process~~ based on user input information, and outputs a request for issuing a person identification certificate to the person identification certificate authority when a person identification certificate corresponding to the user input information cannot be extracted,

said person identification certificate authority creates a person identification certificate ~~in which~~ <u>including</u> an encrypted template, which can be decrypted in said information processing apparatus, and ~~performs an issuing process for~~ <u>issues the person identification certificate responsive to the request from</u> the information processing apparatus, and

said information processing apparatus ~~performs a process for storing~~ <u>stores</u> the person identification certificate issued from said person identification certificate authority in ~~the~~ <u>a</u> storage <u>device</u> ~~means~~ of the information processing apparatus.

2. (currently amended) A person authentication application data processing system according to Claim 1, wherein, <u>when said information processing apparatus stores a</u> ~~in the process for storing the~~ newly obtained person identification certificate in the storage <u>device</u> ~~means~~, <u>and</u> when said newly obtained person identification certificate is a person identification certificate corresponding to the same user for an existing public key certificate which has already been stored in said information processing apparatus, said information processing apparatus ~~performs a process for creating~~ <u>creates</u> pair information of identifiers of

3

each person identification certificate and stores the pair information in the storage device means.

3. (currently amended) A person authentication application data processing system according to Claim 1, further comprising a certificate authority that issues public key certificates as a public key certificate issuing entity,

wherein, said information processing apparatus retrieves performs a process for retrieving a public key certificate used during data communication with an external apparatus, with stored data of the storage device means of the information processing apparatus being used as the retrieval target on the basis of the user input information, creates a pair of a public key and a secret key when the applicable public key certificate cannot be extracted, transmits the created public key to the person identification certificate authority which is the issuing entity of the public key certificate, and makes a request for issuing a person identification certificate,

said person identification certificate authority performs a process for issuing issues a public key certificate corresponding to an individual user or a public key certificate corresponding to said information processing apparatus, and

said information processing apparatus performs a process for storing stores the public key certificate issued from said certificate authority in the storage device means of the information processing apparatus.

4. (currently amended) A person authentication application data processing system according to Claim 3, wherein, in the process for storing the newly obtained person identification certificate in the storage device means, when said newly obtained person identification certificate is a person identification certificate corresponding to the same user for an existing public key certificate which has already been stored in said information processing apparatus, said information processing apparatus performs a process for creating creates pair information of identifiers of each certificate and stores the pair information in the storage device means.

5. (currently amended) A person authentication application data processing system according to Claim 3, wherein, in the process for storing the newly obtained person identification certificate in the storage device means, when said newly obtained person

4

identification certificate is a person identification certificate corresponding to the same user for an existing public key certificate which has already been stored in said information processing apparatus, said information processing apparatus ~~performs a process for creating~~ creates pair information of identifiers of each certificate, stores the pair information in the storage device ~~means~~, and registers ~~together~~ a process identifier which identifies a process including ~~such as~~ services to be used.

6. (currently amended) A person authentication application data processing system according to Claim 1, further comprising a service distribution device ~~construction~~ in which various services such as content distribution can be received from a service provider under the control of a service registration server on the condition of user registration for the service registration server,

wherein said information processing apparatus performs a person authentication process based on a verification process between the template extracted from the person identification certificate and user input sampling information, ~~in which~~ the template being ~~which is~~ person identification data of an individual user who uses the information processing apparatus ~~is stored and user input sampling information,~~ and performs user registration for said service registration server on the condition that person authentication is established.

7. (currently amended) A person authentication application data processing system according to Claim 1, further comprising a service distribution device ~~construction~~ in which various services such as content distribution can be received from a service provider under the control of a ~~the~~ service registration server on the condition of user registration for the service registration server,

wherein said information processing apparatus performs mutual authentication with said service provider by using a public key certificate corresponding to an individual user or a public key certificate corresponding to said information processing apparatus in a process for receiving service distribution from said service provider, and

said service provider provides services for said information processing apparatus on the condition that it is confirmed that the public key certificate used for said mutual authentication corresponds to an authorized user or device registered in said service registration server and said mutual authentication is established.

8. (original) A person authentication application data processing system according to Claim 1, wherein data communication between said information processing apparatus as a person authentication execution entity and the person identification certificate authority as a person identification certificate issuing entity is performed on the condition that the mutual authentication process is established.

9. (currently amended) A person authentication application data processing system according to Claim 1, wherein, for data communication between said information processing apparatus as a person authentication execution entity and the person identification certificate authority as a person identification certificate issuing entity, a data transmission device creates part performs a process for creating an electronic signature for transmission data, and a receiving device verifies part performs a process for verifying the electronic signature.

10. (original) A person authentication application data processing system according to Claim 1, wherein an encryption key used to encrypt the template stored in the person identification certificate issued from said person identification certificate authority is a public key which is set for said information processing apparatus or an individual user.

11. (currently amended) A person authentication application data processing system according to Claim 1, wherein said template includes at least one of biometric information and non-biometric information and a password, the is biometric information of a person such as selected from the group consisting of fingerprint information, retina pattern information, iris pattern information, voice print information, and handwriting information, or a the non-biometric information selected from the group consisting of such as a seal, a passport, a driver's license, and a card, or any combination of two or more of the biometric information and the non-biometric information, or a combination of any of the information and a password.

12. (currently amended) A person authentication application data processing method for performing a person authentication process based on a verification process between by comparing a template extracted from a person identification certificate, in which a the template including which is person identification data of an individual user who uses an

6

information processing apparatus and user input sampling information, said person authentication application data processing method comprising:

a step for providing an information processing apparatus as a person authentication execution entity and a person identification certificate authority as a person identification certificate issuing entity;

a step in which said information processing apparatus ~~performs a process of retrieving~~ retrieves a person identification certificate ~~used~~ for a person authentication ~~process~~ based on user input information, and outputs a request for issuing a person identification certificate to the person identification certificate authority which is a person identification certificate issuing entity when a person identification certificate corresponding to the user input information cannot be extracted;

a step in which said person identification certificate authority creates a person identification certificate ~~in which~~ including an encoded template, which can be decrypted in said information processing apparatus, ~~is stored~~ and ~~performs an issuing process for~~ issues the person identification certificate responsive to the request from the information processing apparatus; and

a step in which said information processing apparatus ~~performs a process for storing~~ stores the person identification certificate issued from said person identification certificate authority in ~~the~~ a storage device ~~means~~ of the information processing apparatus.

13. (currently amended) A person authentication application data processing method according to Claim 12, wherein, when said information processing apparatus stores a ~~in the process for storing the~~ newly obtained person identification certificate in the storage device ~~means,~~ and when said newly obtained person identification certificate is a person identification certificate corresponding to the same user for an existing public key certificate which has already been stored in said information processing apparatus, said information processing apparatus ~~performs a process for creating~~ creates pair information of identifiers of each person identification certificate and stores the pair information in the storage device ~~means~~.

14. (currently amended) A person authentication application data processing method according to Claim 12, further comprising:

a step for providing a certificate authority as a public key certificate issuing entity;

7

a step in which said information processing apparatus retrieves ~~performs a process for retrieving~~ a public key certificate used during data communication with an external apparatus, with stored data of the storage device ~~means~~ of the information processing apparatus being used as the retrieval target on the basis of the user input information, creates a pair of a public key and a secret key when the applicable public key certificate cannot be extracted, transmits the created public key to the person identification certificate authority which is the issuing entity of the public key certificate, and makes a request for issuing a person identification certificate;

a step in which said person identification certificate authority issues ~~performs a process for issuing~~ a public key certificate corresponding to an individual user or a public key certificate corresponding to said information processing apparatus; and

a step in which said information processing apparatus stores ~~performs a process for storing~~ the public key certificate issued from said certificate authority in the storage device ~~means~~ of the information processing apparatus.

15. (currently amended) A person authentication application data processing method according to Claim 14, wherein, in the process for storing the newly obtained person identification certificate in the storage device ~~means~~, when said newly obtained person identification certificate is a person identification certificate corresponding to the same user for an existing public key certificate which has already been stored in said information processing apparatus, said information processing apparatus ~~performs a process for creating~~ creates pair information of identifiers of each certificate and stores the pair information in the storage device ~~means~~.

16. (currently amended) A person authentication application data processing method according to Claim 14, wherein, in the process for storing the newly obtained person identification certificate in the storage device ~~means~~, when said newly obtained person identification certificate is a person identification certificate corresponding to the same user for an existing public key certificate which has already been stored in said information processing apparatus, said information processing apparatus ~~performs a process for creating~~ creates pair information of identifiers of each certificate, stores the pair information in the storage device ~~means~~, and registers ~~together~~ a process identifier which identifies a process including ~~such as~~ services to be used.

17. (currently amended) A person authentication application data processing method according to Claim 12, further comprising:

a step for providing a service distribution device ~~construction~~ in which various services such as content distribution can be received from a service provider under the control of a service registration server on the condition of user registration for the service registration server; and

a step in which said information processing apparatus performs a person authentication process based on a verification process between a template extracted from the person identification certificate and user input sampling information, ~~in which~~ the template being ~~which is~~ person identification data of an individual user who uses the information processing apparatus ~~is stored and the user input sampling information~~, and performs user registration for said service registration server on the condition that person authentication is established.

18. (currently amended) A person authentication application data processing method according to Claim 12, further comprising:

a step for providing a service distribution device ~~construction~~ in which various services such as content distribution can be received from a service provider under the control of a service registration server on the condition of user registration for the service registration server;

a step in which, in a process for receiving service distribution from said service provider, said information processing apparatus performs mutual authentication with said service provider by using a public key certificate corresponding to an individual user who uses the information processing apparatus or a public key certificate corresponding to said information processing apparatus; and

a step in which said service provider provides services for said information processing apparatus on the condition that it is confirmed that the public key certificate used for said mutual authentication corresponds to an authorized user or device registered in said service registration server and said mutual authentication is established.

19. (original) A person authentication application data processing method according to Claim 12, wherein data communication between said information processing apparatus as a

9

person authentication execution entity and the person identification certificate authority as a person identification certificate issuing entity is performed on the condition that the mutual authentication process is established.

20. (currently amended) A person authentication application data processing method according to Claim 12, wherein, for data communication between said information processing apparatus as a person authentication execution entity and the person identification certificate authority as a person identification certificate issuing entity, a data transmission device creates ~~part performs a process for creating~~ an electronic signature for transmission data, and a receiving device verifies ~~part performs a process for verifying~~ the electronic signature.

21. (original) A person authentication application data processing method according to Claim 12, wherein an encryption key used to encrypt the template stored in the person identification certificate issued from said person identification certificate authority is a public key which is set for said information processing apparatus or an individual user.

22. (currently amended) An information processing apparatus for performing a person authentication process based on a verification process between a template extracted from a person identification certificate in which the template is stored and user input sampling information, the template being ~~which is~~ person identification data of an individual user who uses the information processing apparatus, ~~is stored and user input sampling information,~~

wherein said information processing apparatus performs a process for retrieving a person identification certificate used for a person authentication process based on user input information with stored data of the information processing apparatus being used as the retrieval target, outputs a request for issuing a person identification certificate to a person identification certificate authority, which is a person identification certificate issuing entity, when a person identification certificate corresponding to the user input information cannot be extracted, and stores the person identification certificate issued from the person identification certificate authority in a ~~the~~ storage device ~~means~~ of the information processing apparatus.

23. (currently amended) An information processing apparatus according to Claim 22, wherein, in the process for storing the newly obtained personal identification certificate in the

10

storage means, when said newly obtained person identification certificate is a person identification certificate corresponding to the same user for an existing public key certificate which has already been stored in said information processing apparatus, said information processing apparatus performs a process for creating pair information of identifiers of each certificate and for storing the pair information in the storage <u>device</u> ~~means~~.

24. (currently amended) An information processing apparatus according to Claim 22, wherein said information processing apparatus ~~performs a process for retrieving~~ <u>retrieves</u> a public key certificate used for data communication with an external apparatus with stored data of the storage ~~means~~ <u>device</u> of the information processing apparatus being used as the retrieval target on the basis of user input information, creates a pair of a public key and a secret key when a corresponding public key certificate cannot be extracted, transmits the created public key to the certificate authority which is a public key certificate issuing entity, makes a request for issuing a public key certificate, and performs a process for storing the public key certificate issued from said certificate authority in the storage <u>stores</u> ~~means~~ of the information processing apparatus.

25. (currently amended) An information processing apparatus according to Claim 24, wherein, in the process for storing the newly obtained personal identification certificate in the storage <u>device</u> ~~means~~, when said newly obtained person identification certificate is a person identification certificate corresponding to the same user for an existing public key certificate which has already been stored in said information processing apparatus, said information processing apparatus performs a process for creating pair information of identifiers of each certificate and stores the pair information in the storage <u>device</u> ~~means~~.

26. (currently amended) An information processing apparatus according to Claim 24, wherein, in the process for storing the newly obtained personal identification certificate in the storage <u>device</u> ~~means~~, when said newly obtained person identification certificate is a person identification certificate corresponding to the same user for an existing public key certificate which has already been stored in said information processing apparatus, said information processing apparatus performs a process for creating pair information of identifiers of each certificate, stores the pair information in the storage <u>device</u> ~~means~~, and registers together a process identifier which identifies a process such as services to be used.

11

27. (currently amended) A program providing medium for providing a computer program for causing a person application authentication data process for performing a person authentication process to be performed in a computer system based on a verification process between a template extracted from a person identification certificate in which the template is stored and user input sampling information, the template being which-is person identification data of an individual user who uses an information processing apparatus and user input sampling information, said computer program comprising:

a step for retrieving a person identification certificate used for a person authentication process based on the user input information;

a step for outputting a request for issuing a person identification certificate to a person identification certificate authority, which is a person identification certificate issuing entity, when a person identification certificate corresponding to the user input information cannot be extracted;

a step for creating pair information of identifiers of each certificate when said person identification certificate issued from said person identification certificate authority is a person identification certificate corresponding to the same user for an existing public key certificate which has already been stored in said information processing apparatus; and

a step for storing the pair information in a the storage device means.

12
